5.	Journey Elements Analysis	**5-5**
6.	User Journey Experience Summary	**5-5**
7.	Features Review	**6-6**
8.	User Conversations	**6-6**
9.	Conclusion	**6-6**

Scenario:

Explore Nykaa with a clear goal (for example, buying a face mask, finding a lotion for dry skin, or casually browsing).

As you use the app, carefully note the steps you take and where the experience feels:

- Smooth
- Confusing
- Slow
- Frustrating

Identify three specific features or experience and form clear opinions by explaining whether you think they are good or bad and why.

Use case Analysis:

The analysis to be addressed in this assignment is to evaluate how effectively a user can search for, identify, compare, and purchase a suitable lotion for dry skin using the Nykaa mobile application or website. This focuses on understanding whether the platform supports users in completing this goal smoothly, while identifying areas where navigation becomes confusing, product discovery feels overwhelming, pages load slowly, or the buying experience becomes frustrating.

1. Objectives

The main objectives of this usability analysis are:

- To evaluate how easily users can search for and find products such as lotions for dry skin, hair conditioners, and lip balms on Nykaa.
- To evaluate the user journey from opening the application to searching for a product, reviewing details, adding items to the cart, and completing the checkout process.
- To identify moments where the user experience feels smooth, confusing, slow, or frustrating.
- To identify three specific features or experiences and explain whether they are good or bad, along with the reasons for the evaluation.

2. User Experience Focus:

This analysis aims to understand how easily users can search for products, access relevant information, compare options, and complete purchase decisions. The goal is to identify usability

gaps and areas for improvement that can enhance customer satisfaction, simplify navigation, and create a more seamless shopping experience on Nykaa.

3. Selected Goal of Exploration:

The objective of this exploration was to search for and purchase a sunscreen product using the Nykaa mobile application while evaluating the overall user experience from product discovery to checkout.

4. User Journey Steps:

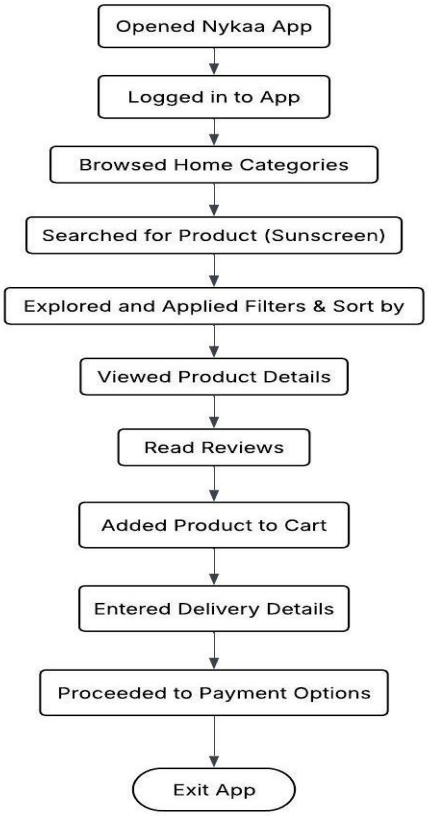

Figure 1: Nykaa User Journey Flow for Purchasing a Sunscreen Product

5. Journey Elements Analysis

Journey	Elements	User Experience Level				Observations
		Smooth	Confusing	Slow	Frustrating	
Opening App		✓				It took < 5Sec.
Login		✓				Didn't ask for any OTP.
Casual Browsing	• *Categories*		✓			Repeated when scrolled down and leading to confusion.
	• *Offers/ Discounts*	✓				Selection within budget made easier.
Searching/Finding a Product	• *Using Filters*	✓				Helps users narrow down products based on brand, category, or specific preferences.
	• *Reviews*			✓		Need to scroll down significantly.
	• *Product Info*			✓		Available after some significant scroll.
Viewing a product		✓				Product information and images are clearly visible.
Purchasing a Product	• *Product Selection*				✓	Too many filter options and confused with categories appearing twice.
	• *Adding to cart*	✓				Simple and intuitive to use.
	• *Product Checkout*	✓				Simple and intuitive to use.
	• *Payment*	✓				Simple and intuitive to use.

6. User Journey Experience Summary:

- Logging into the application was simple and seamless, as no OTP verification was required during the login process.
- The home screen was well-organized and offered multiple categories, including Skin, Makeup, Hair, Bath & Body, Luxe, Fragrance, Wellness, and Appliances, making navigation straightforward.
- Product search was easy and flexible. While searching for a sunscreen, several useful options were available, such as Filters, Sort By, Skin Type, Sun Squad, and Sun Care. Additional discovery features included Best Seller, Price Drop, Most Gifted, Top Rated, Luxe, and New at Nykaa, which helped refine the search experience.
- Selecting a product from the available options was smooth and intuitive.
- Adding a product to the cart and completing the purchase process was convenient. The application simplified address entry by allowing location access, reducing the need for manual address input and improving the overall checkout experience.

7. Features Review:

Feature	Good or Bad	Reason
Pick Your Gift	Good	Creates excitement among customers and encourages them to shop more frequently and revisit the platform.
Filter	Bad and needs to be reorganized	Although filters help users find suitable products more efficiently, the large number of available filter options can create confusion.
Product Discovery	Bad and needs to be reorganized	Some options appear both on the landing page and within filter categories, creating duplication and occasional confusion.

8. User Conversations:

Spoke to two different people - one, who shops products very often since she finds all original products and has faced no issues from placing the order till the product got delivered. The other one, who dropped off from using the app as she quoted – price & deals are better in other apps, too many options seen which caused frustration while browsing.

9. Conclusion:

Overall, Nykaa provides a positive and user-friendly shopping experience. The application makes it easy to discover, compare, and purchase products through intuitive navigation, comprehensive filtering options, and a streamlined checkout process. While minor improvements can be made to certain filter labels, upi payment methods, repetitive product info and product comparison capabilities, the overall experience is smooth, efficient, and customer-friendly.
