PART - I

Product Requirements Document (PRD)

Project Title: ***VitaFit Engage + Enhancing User Retention through Gamification, Rewards, and Community Challenges***

Description – *What is it?*

VitaFit Engage+ is a user engagement initiative designed to improve customer retention, increase repeat workout session attendance, and strengthen the relationship between users and instructors.

The solution introduces two primary features:

1. Gamification & Rewards

- Transforms users' fitness journeys into an engaging and rewarding experience through personalized progress tracking, adaptive milestones, workout streaks, Coach Coins, reward redemption, and achievement badges.

2. Community Challenges

- Builds motivation through instructor-led challenges, accountability circles, friends & family participation, community milestones, and social interactions.
- To support these features, an **Instructor Module** enables coaches to create challenges, monitor user progress, reward achievements, and provide personalized guidance.
- Together, these features create a connected fitness experience that motivates users through progress, recognition, accountability, and community participation.

Problem – *What problem is this solving?*

Although VitaFit offers quality live and on-demand fitness sessions, user engagement decreases after the initial weeks of joining.

The platform currently faces:

- Low customer retention
- Declining repeat session attendance
- Reduced motivation over time
- Weak instructor-user engagement

- Limited accountability for missed workouts
- Minimal recognition of user achievements
- Lack of community-driven motivation

Users often begin enthusiastically but gradually lose consistency due to busy schedules, reduced motivation, and the absence of continuous encouragement.

As a result, many users discontinue their fitness journey before achieving meaningful outcomes, negatively impacting membership renewals and overall customer lifetime value.

Why – *How do we know this is a real problem?*

The proposed solution is supported by survey findings and observed user behavior.

Research Highlights

- ***User Motivation***
  - **81.25%** of respondents stated that **visible progress toward fitness goals** is their strongest source of motivation.
  - Progress tracking received an average importance rating of **4.2/5**, indicating users want measurable evidence of improvement rather than simply completing workouts.
- ***Consistency Challenges***
  - **75%** of respondents reported missing workouts because of busy work or study schedules.
  - Around **31%** indicated difficulty finding suitable workout times, highlighting the need for flexible engagement mechanisms.
- ***Instructor Connection***
  - Users rated personalized instructor guidance highly, demonstrating that coaching and feedback influence continued participation.
- ***Engagement Preferences***
  - Users preferred - Progress tracking, Personalized recommendations and Instructor guidance, over generic reward systems or competitive elements.
  - This indicates that rewards should reinforce meaningful progress and coaching rather than exist as standalone incentives.

Success – *How do we know if we've solved it?*

The success of VitaFit Engage+ will be measured using the following KPIs.

Metric	Current	Target

Weekly Active Users (WAU)	Baseline	+20%
Repeat Session Attendance	Baseline	+25%
30-Day User Retention	Baseline	+15%
Membership Renewal Rate	Baseline	+10%
Average Sessions per Week	Baseline	+20%
Challenge Participation Rate	0%	≥60% of active users
Workout Streak Completion	Baseline	+30%
Coach Feedback Engagement	Baseline	+40%
Reward Redemption Rate	New Metric	≥50% of earned rewards redeemed
Instructor-led Challenge Completion	New Metric	≥70% completion rate

North Star Metric

- Increase the percentage of users completing at least three workout sessions per week for four consecutive weeks.

Audience – *Who are we building for?*

(a) Primary Audience - *Working Professionals (22–40 years)*

Characteristics

- Busy work schedules
- Limited workout time
- Prefer flexible online sessions
- Require motivation and accountability
- Goal-oriented but inconsistent

(b) Secondary Audience - *College Students & Young Adults (18–25 years)*

Characteristics

- Comfortable with mobile-first experiences

- Motivated by social participation
- Interested in rewards and friendly competition
- Enjoy community-driven engagement

(c) Tertiary Audience - *Existing Active Members*

Characteristics

- Already attend sessions regularly
- Need recognition and progression
- Likely to participate in advanced challenges
- Can positively influence community engagement

(d) Instructor Audience

Fitness coaches who require tools to:

- Create and manage challenges
- Monitor participant progress
- Reward achievements
- Provide personalized feedback
- Strengthen user engagement

What – *Roughly, what does this look like in the product?*

The solution introduces two integrated engagement features and one supporting instructor module.

What – What does this solution look like in the product?

This section should answer:

"Exactly what are we building?"

Instead of simply listing the features, explain **how each feature works, what the user experiences, and how it integrates with the existing platform**.

Feature 1 – Gamification & Rewards

Objective

The Gamification & Rewards feature aims to motivate users to build consistent fitness habits by making their fitness journey more engaging, measurable, and rewarding. Rather than encouraging users solely through virtual rewards, this feature combines personalized progress tracking, adaptive milestones, workout consistency, and meaningful rewards to sustain long-term engagement.

The feature focuses on rewarding **consistency and progress** rather than just the number of completed workouts.

1. Personalized Fitness Journey

After registration or during profile setup, users select their fitness goals, preferred workout categories, and weekly availability.

Examples:

- Weight Loss
- Muscle Building
- Flexibility
- Stress Reduction
- General Fitness

Based on these inputs, the system creates a personalized fitness journey with achievable weekly and monthly goals.

The journey continuously adapts according to the user's attendance, completed workouts, and progress.

User Experience

Priya selects:

Goal: *Lose 5 kg*

Availability: *Monday, Wednesday, Friday*

The system generates:

- Weekly Goal: Complete 3 sessions
- Monthly Goal: Complete 12 sessions
- Personalized milestones based on her schedule

This ensures users receive realistic goals instead of one-size-fits-all objectives.

2. Adaptive Milestones

Unlike static milestones that are identical for all users, adaptive milestones dynamically adjust according to user progress, attendance patterns, and availability.

Examples:

- **New User -** ***Milestone:*** *Complete 5 workouts*
- **Experienced User -** ***Milestone:*** *Complete 15 workouts*
- **Busy Professional -** ***Milestone:*** *Attend 3 sessions every week*

Adaptive milestones help users experience continuous achievement regardless of their fitness level.

3. Progress Dashboard

The Progress Dashboard acts as the user's fitness report.

It provides:

- Total sessions completed
- Workout hours
- Calories burned
- Workout streak
- Goal completion percentage
- Milestones achieved
- Upcoming milestones
- Monthly performance comparison

Instead of simply showing numbers, the dashboard visualizes progress using charts, progress rings, achievement cards, and milestone trackers.

4. Smart Workout Streaks

Users earn streaks by consistently attending sessions.

The system also introduces:

- Weekly streaks

- Monthly streaks
- Streak Freeze (one permitted missed day)
- Streak Recovery Challenge

The goal is to encourage consistency rather than perfection.

5. Coach Coins

Users earn Coach Coins for:

- Completing milestones
- Maintaining workout streaks
- Completing instructor-led challenges
- Active participation within the community

Unlike generic reward points, Coach Coins are associated with recognition from instructors and meaningful achievements.

6. Reward Redemption

Coach Coins can be redeemed through a Reward Marketplace.

Examples:

- Premium workout classes
- Membership discounts
- Nutrition consultations
- Wellness webinars
- Merchandise

Reward redemption transforms virtual achievements into tangible value, increasing users' perceived return on engagement.

7. Achievement Badges

Users unlock badges for meaningful accomplishments.

Examples:

- First Workout

- 30-Day Consistency
- Yoga Explorer
- Challenge Champion

Badges are displayed on user profiles and shared within community challenges.

Feature 2 – Community Challenges

Objective

The Community Challenges feature aims to create accountability, social motivation, and instructor engagement by encouraging users to participate in collaborative fitness activities.

Rather than focusing only on competition, the feature promotes shared progress, teamwork, and instructor involvement.

1. Instructor-led Challenges

Every challenge is created and managed by an instructor.

Examples:

Coach Neha's

- *21-Day Morning Yoga Challenge*
- *30-Day Weight Loss Journey*
- *Weekend Zumba Marathon*

Each challenge includes:

- *Description, Duration, Target Goal, Daily Tasks, Rewards, Community Discussion*

Instructor-led challenges establish stronger relationships between instructors and participants.

2. Challenge Progress Tracking

Users can monitor:

- Current progress
- Remaining days
- Percentage completed
- Daily achievements

- Position within the challenge
- Earned rewards

Automatic reminders encourage users who fall behind.

3. Accountability Circles

Users join small groups consisting of 5–10 participants with similar goals.

Each circle provides:

- Daily check-ins
- Progress sharing
- Encouragement
- Friendly accountability

Coach Neha can monitor each circle and send motivational messages when participation declines.

4. Friends & Family Challenges

Users invite friends or family members to participate together.

Examples:

- "Walk 50 km together"
- "Complete 30 Yoga sessions together"

Shared milestones strengthen accountability through existing relationships.

5. Community Feed

The feed enables users to:

- Share completed workouts
- Celebrate milestones
- Encourage others
- React to achievements
- Comment on challenge progress

This creates a sense of belonging without overwhelming users.

6. Community Milestones

Community milestones reward collective effort.

Example:

Entire Yoga Community

Goal: *Complete 20,000 workout minutes this month.*

Once achieved, *All participants unlock bonus Coach Coins or exclusive rewards.*

This promotes collaboration rather than individual competition.

Supporting Module – Instructor Module

Although users interact only with the two primary features, instructors require dedicated tools to manage engagement effectively.

The Instructor Module provides:

- Coach Dashboard
- Challenge Management
- Participant Monitoring
- Progress Tracking
- Coach Coin Approval
- Attendance Monitoring
- Monthly Reviews
- Community Analytics

This module enables instructors to deliver personalized guidance while reducing manual effort.

Integration within the Existing App

These features will be integrated into the existing VitaFit navigation without disrupting the current workout booking and session experience.

Proposed navigation:

Home | Sessions | Progress | Challenges | Rewards | Profile

Instructors access a dedicated **Instructor Module** after login.

How – What is the experiment plan?

This section should answer:

"How will we validate, build, test, and release these features?"

Instead of only listing phases, explain the implementation strategy.

Phase 1 – Discovery & Validation

- Review user research findings.
- Prioritize requirements based on impact and feasibility.
- Define user journeys for Priya (user) and Coach Neha (instructor).
- Finalize KPIs and success metrics.
- Align stakeholders on scope.

Deliverables:

- Validated requirements
- User personas
- Journey maps
- Finalized PRD

Phase 2 – Experience Design

The UX/UI team will:

- Create information architecture.
- Design user flows.
- Develop low-fidelity wireframes.
- Review with stakeholders.
- Produce high-fidelity prototypes.
- Conduct usability testing and refine the design.

Deliverables:

- Information Architecture

- User Flows
- Wireframes
- High-Fidelity Screens
- Interactive Prototype

Phase 3 – Engineering Development

The engineering team will implement the solution iteratively.

Sprint 1

- Personalized Fitness Journey
- Progress Dashboard
- Workout Streaks

Sprint 2

- Coach Coins
- Reward Redemption
- Achievement Badges

Sprint 3

- Community Challenges
- Challenge Progress Tracking
- Accountability Circles

Sprint 4

- Friends & Family Challenges
- Community Feed
- Community Milestones
- Instructor Module

Phase 4 – Testing

Quality Assurance will verify:

- Functional correctness
- Performance
- Security
- Accessibility
- Cross-device compatibility
- End-to-end user journeys

A pilot release with a limited user group will validate engagement before full rollout.

Phase 5 – Launch & Measure

Following successful validation, the features will be released to all users.

The product team will continuously monitor:

- Session attendance
- Challenge participation
- Coach Coin redemption
- Reward usage
- Community activity
- Instructor engagement
- User retention
- Membership renewals

Insights from these metrics will guide future iterations and enhancements.

Experiment & Validation

A/B Testing

Compare:

Control Group

- Existing VitaFit experience

Experiment Group

- Access to Engage+ features

Evaluate over **8–12 weeks** using:

- Session attendance
- Challenge participation
- Reward redemption
- User retention
- Membership renewals
- User satisfaction (CSAT)
- Net Promoter Score (NPS)

When – ***When does it ship and what are the milestones?***

Milestone	Timeline
Product Discovery & Research	Completed
Problem Validation	Completed
Feature Prioritization	Week 1
PRD Finalization	Week 2
Information Architecture	Week 2
User Flows	Week 3
Low-Fidelity Wireframes	Week 3
High-Fidelity UI Design	Weeks 4–5
Interactive Prototype	Week 6
Engineering Planning & Estimation	Week 7
MVP Development	Weeks 8–14
Internal QA & UAT	Weeks 15–16
Beta Release	Week 17

Analytics Review & Iteration	Weeks 18–20
Phase 2 Development	Weeks 21–26

Assumptions

- Users already have active VitaFit accounts.
- Instructors are onboarded to the Instructor Module.
- Notification services and analytics infrastructure are available.
- Existing workout tracking can be reused for progress calculations.

Dependencies

- Mobile application (Android & iOS)
- Notification service
- User profile and workout history
- Reward catalog management
- Analytics platform
- Instructor management system

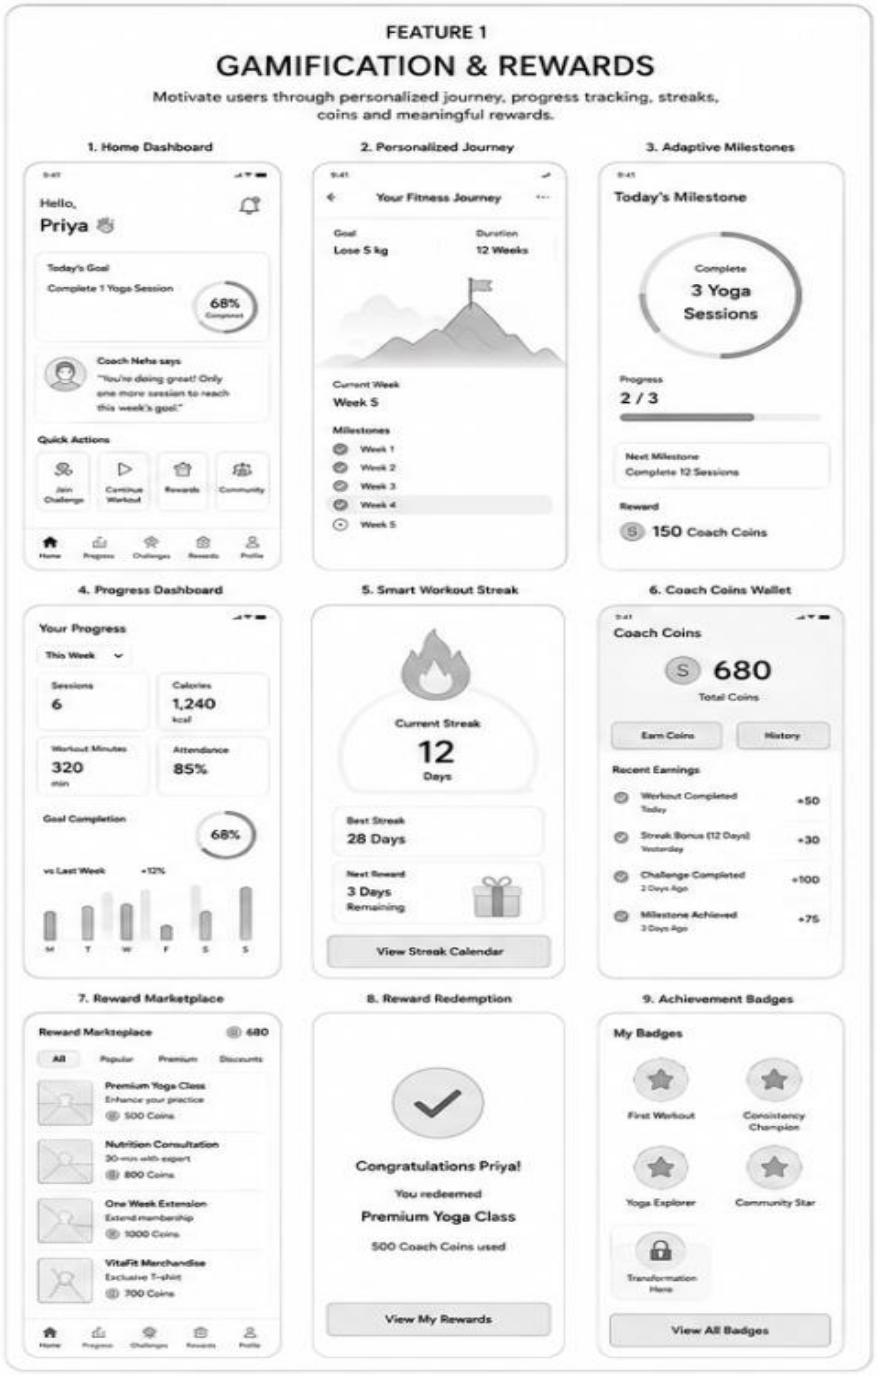

Risks & Mitigation

Risk	Mitigation
Low challenge participation	Personalized challenge recommendations and reminder notifications
Users perceive rewards as low value	Offer redeemable rewards such as membership discounts, premium classes, and wellness consultations
Increased instructor workload	Automate progress tracking and provide efficient challenge management tools
Users lose interest after initial adoption	Introduce seasonal challenges, refreshed reward catalogs, and evolving milestones

PART - II

Visualize Core Workflows

Wireframes/Flows

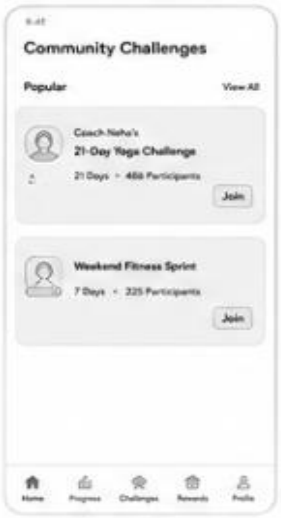

FEATURE 2

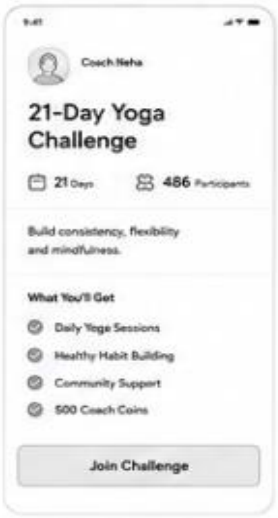

COMMUNITY CHALLENGES

Build accountability and motivation through instructor-led challenges, communities and shared progress.

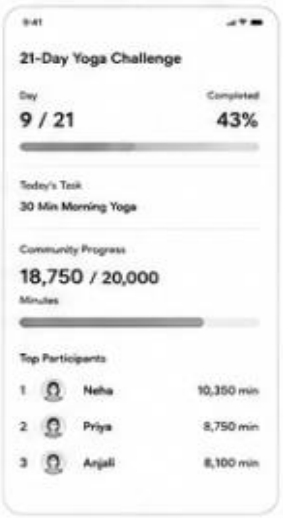

1. Community Challenges

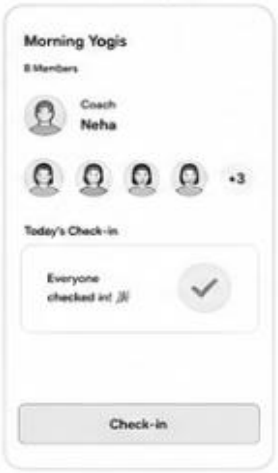

2. Challenge Details

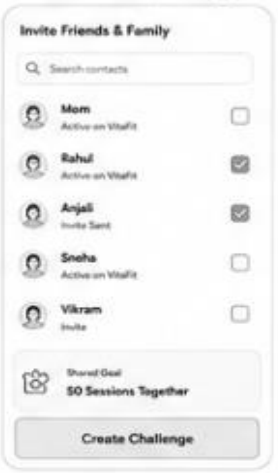

3. Challenge Progress Tracking

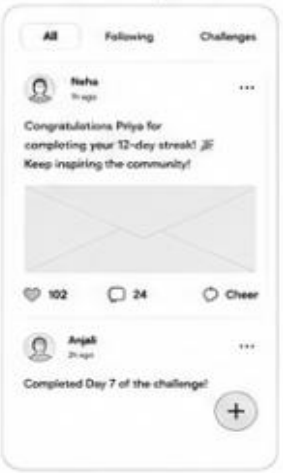

4. Accountability Circle

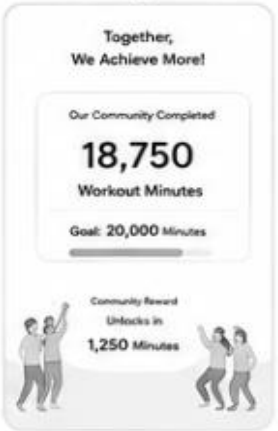

5. Friends & Family Challenge

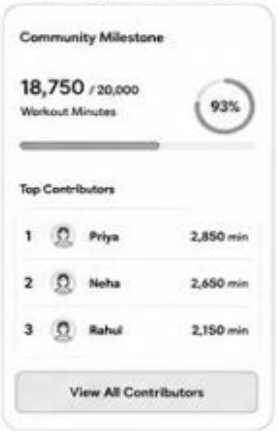

6. Community Feed

7. Community Milestone

8. Community Milestone Progress

9. Challenge Completion

SUPPORT MODULE

INSTRUCTOR MODULE (COACH NEHA)

Empower instructors to manage challenges, monitor progress, reward achievements and guide users effectively.
